

SVMi-8E

Samsung's Enhanced Voice Processing Platform

The SVMi-8E is part of Samsung's fully integrated voice processing platform family. This "in-skin" platform offers the features and functionality of Voice Mail and Auto Attendant while focusing on immediate, personalized, and unobstructed access to callers. SVMi-8E allows your company to increase productivity by efficiently managing your busy call traffic and effectively serving your business communication needs.

An extension of the popular SVMi E-Series, the SVMi-8E adds capabilities of up to 8 ports and 1,000 mailboxes to your telephone system. Specifically designed to integrate into Samsung's iDCS 100, iDCS 500 (Release 1 and 2), DCS, and DCS 50si telephone systems, the SVMi-8E provides multi-language support for 12 available languages (English, Spanish, and French come standard). Fax-on-Demand, Network Mailboxes and a LAN connection are just a few of the comprehensive set of features which make the SVMi-8E unlike any other voice processing platform in today's market.

Combining the SVMi-8E's features with the functionality of a Samsung phone system, Samsung offers feature rich business systems to propel your company into future.

Highlighted Voice Mail Features

Answering Machine Emulation Monitor while messages are being left in your voice mail box through the speaker of your keyset just like screening a call on your home answer machine.

Broadcast Authorized personal can broadcast a message to everyone in the system.

Call Back Press one key and automatically call back the person who left you the message.

Date and Time Stamp Each message received is date and time stamped upon arrival.

Direct Messaging / Quick Memo Easily leave a message for yourself or another person without calling the extension first.

External Notification When you have messages in your mailbox, you are alerted at your cell phone, home phone or a pager.

Individual Mailbox Greeting Each mailbox has its own personalized greeting recorded in their voice.

Message Scan Easily scan your messages. The first few seconds of each message will be played, and then it will go to the next message.

Message Fast Forward and Rewind Easily skip through a message if you are looking for a specific piece of information.

Message Forward With Append Messages can be forwarded to other mailboxes in the system with introductory remarks.

Message Pause Pause the messages at any time while listening to your messages.

Message Retrieve Any sent message can be canceled before the recipient has received it.

Message Skip While listening to any message, you can quickly search for any message, and still save all the messages as new.

Message Undelete Retrieve messages that have been previously deleted that day. No more losing valuable messages by pressing the wrong button.

Message Waiting Light Indication An instant indication on your keyset tells you when you have new messages. Press one button and connect with your voice mail.

Multiple Language Support System and mailbox prompts can be individually set to a specific language. †

New or Old Message Selection Access your mailbox and choose to listen to either new or old messages.

Personal Mailbox Administration Change settings for your mailbox any time you like, from any phone anywhere in the world.

Selected System Features

Alphabetic Directory (Multiple) Callers who do not know your extension number but know your name may enter the first few letters of your name and then easily be transferred.

Audiotex Audiotex allows you to provide information only, without giving the option to record a message.

Automatic After Hours Answering The main greeting changes from the day to night greeting automatically.

Caller ID Compatible If you have caller ID, the SVMi-8E captures the caller ID and saves it with each message. Then you can call back the person leaving the message.

Compound or Multiple Document Delivery Any number of fax documents may be linked to form a single fax document.

Incoming Call Overflow You can answer any or all lines immediately or answer only the calls that your operator does not pick up.

Keypad Display and Soft Key Navigate through the SVMi-8E menus using the keypad display and the soft keys below the display to respond to prompts.

Recordable System Prompts Add or record selected prompts to suit your particular business.

Synchronized Clock Changing between day and night modes is always synchronized with the phone system.

* Remote Programming requires use of external modem sold separately.

† 12 Languages are available. 9 simultaneous languages are supported.

Ask your Authorized Samsung Dealers for details.

Features subject to change without notice.
